The Master of Landscape Architecture program involves the investigation of new thoughts and applications which advance the art and science of landscape architecture. The central theme of sustainable design is characterized by a careful understanding of landscape ecology, landscape planning, cultural landscapes, history and theory, fine art, and technical and digital media proficiency.

THE PROGRAM

The Master of Landscape Architecture (MLA) is a three-year LAAB accredited graduate professional degree program that aspires to be an eminent design program with an emphasis on sustainable strategies.

This program prepares students for practice through integration of scientific knowledge and artistic intervention with design outcomes that demonstrate sustainable technologies, socio-cultural preservation, and aesthetic experience in the creation of healthful, livable, and meaningful outdoor environments.

CURRICULUM

The Master of Landscape Architecture curriculum prepares students with essential knowledge, skills, and values central to the profession so that students become scholars of the discipline.

The program is defined by the quality of our students. In addition, faculty members are committed to integrated research where discovery, application, integration, teaching and engagement, mesh with our commitment to prepare students to enter professional practice. Research and “real-world” community service projects are fundamentally integral to the professional curriculum.
