<td>ARC 496d/596d (MSArch)</td>
<td>Social and Behavioral Issues in Built Environments (3cu) T 9:30am – 12:00pm (Live Online) Engineer</td>
<td>3</td>
<td>This course introduces students to social and psychological issues in architecture and urban design and to the burgeoning field of environment and behavior. Students will examine social and behavioral factors in environmental design through case studies, critical thinking and discussions, and small-scale design exercises. A variety of built environments will be discussed, ranging from building interiors to parks, urban plazas, streets, and sidewalks. Students will understand how to apply the outcomes of environment-behavior research to their design projects and existing places and spaces. As future designers committed to social responsibility, students must anticipate and respond to people’s needs. Ignoring these needs not only leads to costly errors, but also negatively influences health, wellbeing, productivity, and performance.</td>
<td></td>

<td>History + Theory Elective: Trans Journal (3cu) T 5:00pm – 7:00pm (Flex In Person) Robinson</td>
<td>3</td>
<td>This is a team-based course designed to instruct students on a variety of professional and academic skills related to the creation of a student-edited journal. Through group and individual exercises, students will learn how to be critical editors of written and graphic content.</td>
<td></td>
</tr>
<tr>
<td>ARC 471S (SBE)</td>
<td>History + Theory IV: Contemporary Architecture and Urban Theory (3cu) (Fully Online) Robinson</td>
<td>3</td>
<td>This critical survey of contemporary urban and architectural theory will concern itself with the key debates, strategies, and tactics deployed by theorists and design practitioners. Using a thematic approach, theoretical texts, blogs, films, art, as well as exhibitions will familiarize students with important social, economic, political, and technological agendas that have shaped the design the built environment and public realm. Through lectures, discussions, and assignments, students will hone their critical thinking skills and learn to analyze and comprehend the complexity of architectural and urban conditions now and in the future.</td>
<td></td>
</tr>
<tr>
<td>ARC 535</td>
<td>ARC 535 Forms of Critical Inquiry and Expression (3cu) (MW 10:00-10:10:50 am lectures (Live Online); Friday am discussion sections Flex In-Person) (Hollengreen, Weinstein, Wachter)</td>
<td>3</td>
<td>This course provides exposure to major themes in contemporary theories of architecture and other areas of cultural production and professional practice, as they are enunciated in text, image, film, and three-dimensional media. Knowledge of current and emerging ideas shaping the field is critical to being able to situate oneself intellectually, socially, and ethically. The course will encourage critical analysis of these ideas and thus serve as a bridge between foundational courses in the master’s programs and more self-directed work in the final semesters of one’s study. The final work of the class is a research-informed design brief meant to inform masters’ Capstone projects, theses, or reports.</td>
<td></td>
</tr>
</tbody>
</table>
COURSE DESCRIPTION / SPRING 2020 / ARCH 461a/561a
The course focuses on the effective use of water and its impact on energy consumption and building performance. It emphasizes the issue of water/energy nexus through a proposed four-faceted body of knowledge addressing 1) Water Conservation, 2) Water Harvesting, 3) Water Reuse, and 4) Water Energy Generation Technologies. Although water reduction and water harvesting have recently become more common in green buildings, water reuse and water energy generation are relatively newer technologies that demonstrates greater promise to contribute to the affordability of water and its use as alternative energy sources. The course also emphasizes the environmental benefits from integrating water saving strategies to modify thermal conditions—that would otherwise use energy to achieve—while the saved water will facilitate exterior landscape development. Course delivery will include calculative and empirical methods, use of computer simulation, design nomographs, and hands on inquiry based learning through selected laboratory sessions.
Internship

UA Student Internships are based on the recognition that experiences beyond the classroom enrich professional and personal growth. Students work, for prevailing wages, in a professional office while completing on-line course assignments. The assignments are designed to aid students in initiating their NCARB and AXP records, document work hours appropriately, and reflect upon professional learning experiences.

Training and practice in actual service in an architectural, construction, or design-related firm.

EARN ACADEMIC CREDIT WHILE YOU WORK!

If you have a job in a professional office lined up for this fall, consider doubling down and earning credit for a Practice Elective while you log your AXP hours. You earn one credit unit for every 45 hours worked in a firm - up to 3 credit units. Assignments are set up in D2L to document your office experience and require no additional work. By instructor’s permission.

OFFICE HOURS BY APPOINTMENT
MARY HARDIN
mchardin@arizona.edu
This course introduces students to social and psychological issues in the built environment and to the field of environment and behavior. Students will examine social and behavioral factors in environmental design through case studies, critical thinking and discussions, and small-scale design exercises. A variety of built environments will be discussed, ranging from building interiors to public and community spaces such as urban plazas.

Students will understand how to apply the outcomes of environment-behavior research to their design projects and existing places and spaces. As future designers committed to social responsibility, students will learn to anticipate and respond to people’s needs. Understanding these needs avoids costly errors as well as positively influences health, wellbeing, productivity, and performance.
By 2050, 70% of the world’s population will be urban. The emerging architect is tasked to design in an urbanizing world. This course teaches students the basic concepts, components, and tools of urban design. The categories of infrastructure + environment, governance + economy, and society + community structure the course. As the world continues to urbanize, the greatest challenges to our cities will be in sustainability, particularly in the least developed countries where the pace of urbanization is the fastest. Each week, a critical issue in sustainable urban design is identified in lecture and then characterized through a global case study. Fourteen cities from 8 regions are inspected for challenges and design solutions, including Latin America, Africa, Europe, Russia, India, China, North America, and the Middle East. By linking theory with practice, students understand how some of the most pressing problems of cities can be addressed through sustainable urban design and locate where architects have agency to propel positive solutions. Three research projects are required.
HEALTH AND WELLBEING IN THE BUILT ENVIRONMENT

<td>PLG 202</td>
<td>Cities of the World: An International City Planning Perspective (Gen Ed Tier II - Individuals and Societies) (3) Fully Online, Chorover</td>
<td>More than half of humanity lives in cities. This course surveys international cities to help students understand the world's urban systems, global variations in urban environments, and the diversity in organization and functioning of cities. Using a case study methodology, the class compares and contrasts contemporary paths of urban development. Students gain an introduction to a variety of urban forms and approaches to sustaining the urban environment worldwide. The class examines the interplay between human activities and land, water, and energy policies that shape the use of urban resources to produce the built environment. Students will be introduced to the tasks and methods of urban planning and consider what determines variations in urban design, land use, transportation, energy use, water consumption, infrastructure plans, economic development, and urban social functions. Students will learn about improving the quality of urban environments by comparing contemporary cities, both industrialized and developing cities.</td>

<td>Sex in the City (Gen Ed Tier II Individuals and Societies) (3) Fully Online, Iroz-Elardo</td>
<td>This class is designed to illuminate how gender - as an identity - and sex - as a series of public and private activities, a commodity or economic determinant, and a part of identity - shape urban communities and are themselves shaped by urban planning. This class explores the implications of what it means to plan for different people in a variety of urban contexts - e.g., transportation safety, homeless women shelters, perceived fear of public space, design of public parks, accessibility of groceries - while addressing the overarching questions: Who plans for cities? And for whom are cities planned? How are communities shaped by urban planning and policy? Why should we think about the different ways people experience, use, and are shaped by cities? And, Why does it matter to think about gender in the context of urban planning?</td>

School of Landscape Architecture and Planning Electives - Spring 2021

Undergraduate

**SBE 202**  
Professional Communication and Presentation (3)  
TuTh 9:30am - 10:45am  
Live Online, Iuliano | Fully Online, Sami  
This course explores effective oral communication within the professions of the built environment with the intent of increasing student understanding of and competency in oral communication in preparation for entry into the world of practice.

**SBE 222**  
History of The Built Environment II (3)  
Fully Online, Zuniga Teran  
The study of the history of the built environment provides a general understanding on how human societies have adapted the form of the built environment to their unique cultural, political, economic, and environmental challenges across time. This is the second course out of two courses and they are organized in modules that correspond to different climatic zones. These are: 1. Hot and arid, 2. Hot and humid, 3. Cold and arid, 4. Cold and humid, 5. Temperate and arid, 6. Temperate and humid. This second course includes the last three climate zones (cold and humid, temperate and arid, and temperate and humid).

**RED 301**  
Introduction to Real Estate (3)  
W 4:00pm - 6:30pm  
Haury Anthro Bldg, Rm 129, Marian  
This is an introductory course that provides students interested in the property market introduction and exposure to its people, vocabulary, economic forces, regulatory and environmental frameworks, capital markets, and transaction processes. Completion of the course will prepare students well to take state real estate sales licensing courses if they choose to pursue such a pathway.

**SBE 301**  
Introduction to Design Thinking (4)  
WF 11am - 1:30pm  
Architecture 104 & Flex In-Person, Bean | Fully Online, Cederberg/Bean  
This course introduces students to the essential methods of visual communication and ordering systems through a series of interrelated exercises. Techniques such as investigative sketching, freehand drawing, and digital design communication are considered in relation to their potential to reveal the world around us with a heightened sense of awareness. Issues such as place, material, structure and enclosure will be explored empirically and conceptually at a variety of scales and applications. Importantly, this is an interdisciplinary based studio – students enrolled in this course will have the ability to engage in a variety of different design strategies.

Undergraduate and Graduate

**PLG 408/508**  
Climate Action Planning (3)  
Tu 10am - 12:30pm  
Architecture, Rm A304Y, Keith  
Cities are on the front-lines of climate change as the built environment is impacted by increasing sea level rise, floods, drought, wildfires and urban heat. This course explores the challenges and opportunities of planning and designing the built environment for climate adaptation and resilience. Urban resilience is the capacity of cities and their interconnected systems to survive, adapt, and thrive no matter what chronic stresses and acute shocks they experience. Students will learn a range of climate impacts on the built environment, examine different planning and design strategies to increase urban resilience, and explore real world case studies of cities planning for urban resilience. Urban resilience will be considered through a variety of planning and design scales — buildings, landscapes, neighborhoods, cities, and regions. This course emphasizes inclusive planning processes that engage the most vulnerable populations to climate impacts. Guest lectures from researchers and practitioners will also be featured to share their professional experiences in connecting climate science to planning and design efforts.

<td>Live Online, Currans</td>
<td></td>
<td>Transportation and Land Use (T&amp;LU) is an elective course to satisfy the Transportation Concentration requirements for the Masters in Planning program within the College of Architecture, Planning and Landscape Architecture (CAPLA). The objective of this course is to introduce planning students, and those from other majors and programs, to concepts and methods used in the arena where transportation planning and land use development intersect. This course will discuss various theories related to linking transportation investments, land use, and travel behavior, and will consider policy approaches used to address urban planning issues such as congestion, automobile dependence, and planning for infrastructure investments.</td>
</tr>
<tr>
<td>PLG 472/572</td>
<td>Environmental Land Use Planning (3) Th 1:30pm - 4:30pm Live Online, Li</td>
<td>3</td>
<td>Live Online, Li</td>
<td></td>
<td>This course focuses on the complex linkages between human and natural systems. Environmental planning utilizes methodologies which are systematic, iterative, and transparent and relies on integrating a wide spectrum of contemporary environmental issues in order to achieve more sustainable land use outcomes. As an interdisciplinary course, it draws from the fields of planning, geography, design, land use law, public policy, economics, natural science, and engineering among others. This course aims to equip students with a broad knowledgebase which focuses on landscape components and processes. Further, students will develop the necessary land use analysis and management skills in order to help guide land use decision making, engage stakeholders, and minimize/mitigate conflict between natural and built systems in an effort to produce more sustainable land use patterns and plans.</td>
</tr>

LAR 150B1 American Design on the Land

Gen Ed Tier I
Individuals & Societies

This course is a broad exploration of the natural and built American landscape and how the unique character of American culture continues to shape this place. With readings, discussions, and videos, students will examine dynamic dialogue between humans and nature to understand the creation of the American landscape. Students will understand that both the built environments, such as cities, parks, gardens, and preserves of wild, scenic, and cultural landscapes can be interpreted as physical manifestations of different American ideologies.

Students will learn about the lives of everyday Americans as well as the contributions of great individuals from various cultural backgrounds and periods in time. These will include Native Americans, artists, architects, landscape architects, planners, natural and social scientists, political figures, businessmen and women and writers.

PLG 202 Cities of the World

GEN ED TIER II
INDIVIDUALS & SOCIETIES

This course surveys international cities to help students understand the world’s urban systems, global variations in urban environments, and the diversity in organization and functioning of cities.

The class examines the interplay between human activities and land, water, transportation, and energy policies that shape the use of urban resources to produce the built environment.

Learn about the ways in which cities are becoming more vibrant, equitable, greener and more sustainable.

Course Objectives

After completing the course requirements, students should be able to:

• Understand the history of the development of cities and how cultural, political, environmental, physical, and economic factors have impacted their development.

• Recognize the impact of practitioners in planning and associated fields of civil engineering, landscape architecture, environmental design, cultural geography and architecture have on the form and function of cities.

• Identify key components that help create a great city while also explaining the complexities involved in how cities operate.

• Discuss the future of city design and how cities can be better designed for social justice, economic equality and environmental sustainability.

SBE 202 Professional Communication & Presentation

This course explores effective oral communication within the professions of the built environment with the intent of increasing student understanding of and competency in oral communication in preparation for entry into the world of practice.

Learning Outcomes

Our goal with this course is for you to build the skills necessary for a life-long pursuit of professional education and mastery of skills as an essential element of success in professional communication.

As a result of successfully completing this course, students should be able to:

• Show and use rhetorical theory and strategies for verbal and nonverbal communication;
• Design an effective message including the selection of appropriate content, organizational structure, and supporting media;
• Deliver effective oral presentations with confidence, clarity, and presence utilizing audience analysis, gestures, inflection, vocabulary, and supporting visual aids;
• Analyze and constructively critique one's own presentation, both content and delivery, as well as that of members of a project team;
• Utilize ethical standards to help guide professional and responsible communication.

SPRING 2021 | WEDNESDAYS 4:00 - 6:30 | 3 UNITS

RED 301 Intro to Real Estate

Are you interested in learning more about real estate, the single largest component of wealth in society? In this introductory course, you will learn real estate vocabulary; how to purchase, sell, and improve real estate (from a home to commercial investment properties); and legal, financing and tax considerations.

Guest speakers with over 100 years combined experience include residential and commercial real estate brokers, title executives, real estate attorneys and local executives involved in development and commercial real estate investment. You will also learn about career opportunities in all these fields—some of which have unlimited income possibilities.

This is a required course in the brand new University of Arizona Minor in Real Estate Development.

OUR IN-PERSON CLASS IS LIMITED TO 30 STUDENTS, SO ENROLL EARLY.

PLG 408/508 Climate Action Planning

Cities are on the front lines of climate change as they emit the majority of the world’s greenhouse gases and are increasingly impacted by sea level rise, floods, drought, extreme heat, and wildfire.

This course explores climate action planning and the challenges and opportunities of planning for more sustainable and resilient cities.

Students will learn about greenhouse gas emissions accounting, vulnerability assessments, localized climate change projections, climate impacts, and how cities can both mitigate greenhouse gas emissions and plan for climate adaptation.

Climate action planning will be considered through a variety of professional disciplines and scales including neighborhoods, cities, and regions. This course emphasizes inclusive and equitable planning processes that engage those most vulnerable to climate impacts.

**MEETING TIME**

*Live Online - Tuesdays 10:00 A.M.- 12:30 P.M.*

**Learning Outcomes**

After completing the course requirements, students should be able to:

- Demonstrate an understanding of how cities contribute to greenhouse gas emissions and how they are impacted by climate change.
- Critically analyze climate action planning strategies to decrease local greenhouse gas emissions and increase resilience to climate impacts.
- Compare, contrast, and evaluate climate action planning efforts undertaken by cities of diverse sizes, demographics, and geographies.

In addition to the above learning outcomes, graduate students should be able to:

- Develop research skills by writing an original research proposal, conducting a literature review, finding and analyzing the appropriate data, and summarizing results with recommendations.
- Demonstrate professional presentation skills with a focus on both verbal and visual presentation techniques.

**CONTACT INFORMATION**

Ladd Keith, Assistant Professor
ladd@arizona.edu
Geodesign is a rapidly evolving approach which integrates geographic science into the design process.

Although there are various definitions about what is Geodesign, a consensus exists regarding the importance of geographic information and geospatial technologies in planning and design. Geodesign inspires GIS professionals and designers and planners to explore new ways to collaborate. The goal of this class is to introduce recent development of geographic information and geospatial technologies, and to explore their applications in planning and design.

---

*Geodesign will open many new opportunities for the traditional design communities of landscape architecture and planning. People will realize the power of good design blended with spatial information and analysis.*

—Jack Dangermond, ESRI Founder and President.

CONTACT INFORMATION
Shujuan Li, Associate Professor
shujuanli@arizona.edu
During the COVID-19 pandemic, the US has witnessed the largest disruptive event in transportation in our country's modern history. In response, transformations in behaviors and technologies have shaped how we use both public and private spaces—restricting (non)essential activities, telecommuting, retail curbside pick-up, socially distanced public transit. During this time, we have seen firsthand the dynamic interplay between the activities that people need or want to do and the transportation systems that facilitate or inhibit them.

In this course, we explore the interdisciplinary theories and policies that address this interplay between travel and activity behaviors—transportation and land use. Through this lens, we will also examine how various pandemic responses, travel and/or activity restrictions, and innovations in technology may have facilitated changes in behaviors in the short and long term.

For the practical project this year, students will create a transit-oriented development plan to integrate Bus-Rapid Transit along the Broadway corridor for the City of Tucson. In this project, we will practice implementing what we have learned in the course to strengthen the relationship between transportation and land development along this corridor.

MEETING TIME

Live Online - Mondays 1:00 - 3:30 P.M.
The use of land is perhaps the most significant driving force of human impact on the natural environment.

Currently, only 5% of the Earth’s land surface area is unaffected by humans. Environmental land use planning is a critical component of various land planning, design, and management efforts.

This course aims to equip students with a broad knowledge base of the complex linkages between human and environmental systems. Furthermore, students will develop essential land use analysis and management skills to help guide land-use decision making, engage stakeholders, and minimize/mitigate conflicts between the natural and built environments in order to produce more sustainable land-use patterns and plans.

This interdisciplinary course is recommended for students from planning, landscape architecture, architecture, geography, public policy, economics, environmental science, engineering, and related fields.
Mode of Instruction will be Flex-In Person, with most lectures in the early part of the semester given online.

This course introduces students to the real world skills of historic preservation documentation and planning. Working on two projects, a Historic American Landscapes Survey and a Preservation Master Plan for the Florida Work Center (1920s–1930s era) at the Santa Rita Experimental Range, students will:

- Complete archival research by reviewing documents and historic photos;

- Conduct field work to document features in the landscape including plants, walls, and structures as well as site organization and circulation systems;

- Engage with stakeholders such as the University of Arizona, Bureau of Land Management and community groups;

- Use a federal documentation template to complete a survey to submit to the National Park Service and which will be archived in the Library of Congress;

- Prepare a complete preservation master plan for the site.

Course open to upper division undergraduates and graduate students. Instructor’s permission required for students who have not taken ARC / LAR / PLG 471f/571f.

The course will be co-taught by Gina Chorover, MLA, AICP, and Helen Erickson, MLA. Both have completed numerous heritage conservation planning projects in Arizona and beyond. If you have questions about this class or would like additional information, contact Gina at gchorove@email.arizona.edu, or Helen at hbe@email.arizona.edu.
